

# Hybrid Container Management with Google Anthos Design Workshop

Build an actionable roadmap to successful cloud adoption.

## About this workshop

Expanding your hybrid approach across multiple clouds, datacenters and geographical regions creates management complexities. To succeed, you need a long-term strategy, centralized governance and consistency across every process. Insight is here to help.

This workshop will give you the support to design a hybrid cloud strategy for Google Anthos — an app modernization platform that centralizes workload management and unifies your environment. Participants will uncover integration strategies for networking, storage, role-based access control and monitoring/logging. You'll work closely with Insight's Anthos experts, who put industry best practices — and your organization's goals — at the heart of every interaction.

## Who should attend

C-suite business and technical decision-makers will gain a deeper understanding of how Google Anthos can help them achieve their cloud strategy and enablement objectives.

## Preparing for transformation

To ensure you receive the greatest value from this workshop, you'll need:

- A group of five to 10 technologists and business leaders
- Participation from leaders responsible for designing and architecting your enterprise IT systems and solutions
- Participation from engineering leaders who understand the infrastructure and licensing costs that factor into on-premises versus cloud economics
- A culture of cloud agility

## Workshop topics

Over the course of this workshop, we'll begin to design your hybrid cloud strategy based on your specific goals and requirements. Topics include:

- Anthos integration with Kubernetes clusters — on premises or in the cloud — no matter the provider
- Best practices for monitoring, logging, governance and security through Anthos
- How Anthos can help achieve hybrid cloud strategy and enablement objectives
- Defining actionable goals to address challenges and opportunities in your current hybrid cloud approach
- Formulating a targeted new hybrid cloud strategy and enablement plan
- Aligning your goals and objectives with Google and industry best practices

### Duration

1–2 days

### What to expect

- **Design architecture and goals** with hybrid and multi-cloud experts.
- **Map Anthos installation and deployment** across cloud and data centers.
- **Plan global policy and governance** across workloads, clusters and resources.
- **Design proper RBAC** and security controls.
- **Get strategic guidance** through every phase of Anthos adoption.
